AB Antisense compds., compns. and methods are provided for modulating the expression of bcl-6. Bcl-6 (also known as B-cell CLL/lymphoma 6, zinc finger protein 51 and LAZ3) is a sequence-specific DNA-binding transcriptional repressor implicated in several types of lymphomas. The compns. comprise antisense compds., particularly antisense oligonucleotides, targeted to nucleic acids encoding bcl-6. All compds. are chimeric oligonucleotides (gapmers) 20 nucleotides in length, composed of a central gap region consisting of ten 2'-deoxynucleotides, which is flanked on both sides by five-nucleotide wings composed of 2'-methoxyethyl nucleotides, and the internucleoside linkages are phosphorothioate throughout the oligonucleotide. Methods of using these compds. for modulation of bcl-6 expression and for treatment of diseases associated with expression of bcl-6 are provided.
